

RADIOLOGY

At Health Pointe, we're always scanning for the needs of your family. X-Ray, CT, Mammography, Bone Density, Ultrasound and MRI — Health Pointe's Radiology team provides comprehensive, collaborative care where you live, work and play.

Computerized Tomography (CT)

CT images provide more detailed information than plain x-rays. The scan combines a series of X-ray images taken from different angles, computer processing creates cross-sectional images of the bones, blood vessels and soft tissues inside your body. Health Pointe is part of the American College of Radiology Registry for Lung Cancer Screening, because of this, Health Pointe can perform CT low dose lung screenings and it can be billed to the patient's insurance.

Monday, Wednesday, Friday 8 a.m. to 4 p.m.

X-Ray

We use x-rays for more than to diagnose broken bones, we also use them for screening, diagnosing and treating other medical conditions such as infections, arthritis and tumors.

Monday to Friday 7:30 a.m. to 8 p.m.

Saturday and Sunday 8 a.m. to 4 p.m.

Mammography

Mammography is an x-ray picture of the breast used for both screening and diagnosis. We're also excited to provide tomosynthesis 3- imaging technology, capable of detecting signs of breast cancer other mammograms might miss.

Monday to Friday 9 a.m. to 5 p.m.

Health Pointe is offering walk-in mammography.

However, it's always encouraged to call us ahead.

Bone Density

Painless and noninvasive, this test shows if you have normal bone density, low bone density (osteopenia) or osteoporosis. The lower the bone density, the greater the risk is for breaking a bone.

Monday and Tuesday 8 a.m. to 4 p.m.

Ultrasound

An ultrasound scan is a test that uses high-frequency sound waves to capture live images from inside the body. It allows your doctor to see problems with organs, vessels and tissues without needing to make an incision.

Monday to Wednesday 7 a.m. to 5:30 p.m.

Thursday 7 a.m. to 4:45 p.m.

Friday 8:15 a.m. to 4:30 p.m.

Magnetic Resonance Imaging (MRI)

An MRI is a diagnostic procedure that uses a combination of a large magnet, radio frequencies and a computer to produce detailed images of organs and structures within the body.

Tuesday and Wednesday 7 a.m. to 7 p.m.

Saturday 8:15 a.m. to 3:45 p.m.
